

1.0 Connect WLAN :

`sudo nano /etc/wpa_supplicant/wpa_supplicant.conf` →

```
network={
    ssid="ssid"
    psk="passphrase"
}
```

```
network={
    scan_ssid=1
    ssid="ssid"
    psk="passphrase"
}
```

1.1 Exit and save script

`ctrl + x` → `'O'` →

2.0 Define fixed IP address (LAN)

`sudo nano /etc/dhcpd.conf` →

2.1 Go at the end of the file and add the 4 lines of code

↓↓↓
Interface eth0
Static ip_address=10.x.x.x/8
Static routers=10.x.x.x
Static domain_name_servers=8.8.8.8

2.2 Save and exit

`ctrl + x` → `'O'` →

3.0 Start DHCPD service

`Sudo systemctl enable dhcpd`

3.1 Reboot to apply

`Sudo reboot` →
